RAMAN NEGI

Full Stack Developer • Three.js / WebGL • Real-Time Systems • AI Integration

Raman@gmail.com • +91-9258482708 • LinkedIn • GitHub • Uttarakhand, India

ACHIEVEMENTS & RECOGNITION

- **1st Rank — Hack-IOT (Feb '24):** Secured top position among 400+ participants in LPU's national IoT Hackathon.
- **Published & Accepted Patent:** "An Unconscious Detection and Health Monitoring System" — filed and accepted.

TECHNICAL SKILLS

Languages: JavaScript, Python,C++,Java
Frontend: React.js, Tailwind CSS, Three.js, WebGL
Backend: Node.js, Express.js, FastAPI, Django REST Framework
Real-Time & Media: Socket.IO, WebRTC (video/screen share/file transfer)
Databases & Cloud: MongoDB, Supabase, Firebase, Djongo
AI & APIs: Cohere AI, OpenAI / Claude API, Python OCR, Postman
DevOps & Tools: Vercel, Render, Git, JWT Auth,Docker,Maven

PROJECTS

StarCop — Startup & Investor Networking Platform | Live Demo *Dec 2025*

- Built a full-stack platform enabling startups and investors to connect via opportunity posting, pitch videos, profiles, and permission-based workflows.
- Implemented real-time chat with message request/approval system, notifications, and live meetings using Socket.IO.
- Delivered Google-Meet-style WebRTC video calls with shareable invite links, screen sharing, and file transfer for external users.

Tech: *React, Tailwind CSS, Node.js, Express, Socket.IO, WebRTC, Supabase, Vercel, Render*

Swasth AI — AI-Powered Health & Wellness Platform | GitHub *Aug '25*

- Designed and built REST APIs with Node.js, MongoDB, Firebase, and JWT authentication from scratch.
- Integrated a Python-based Django OCR service with Cohere AI to deliver intelligent, personalized health recommendations.
- Optimized async AI workflows resulting in a secure, fast, production-ready platform with seamless UX.

Tech: *React, FastAPI, Node.js, Express, Python OCR, Firebase, MongoDB, Cohere AI*

Solar Command — 3D Priority Task Visualizer | Live Demo *Dec' 25*

- Designed a completely original Three.js app where tasks are 3D planets — size and gravitational weight are determined by task priority.
- The highest-priority task renders as the sun; completing tasks triggers planet destruction animations. Fully deployed on Vercel.

Tech: *React, Three.js, WebGL, Vercel*

3D DSA Graph Visualizer — Algorithm Visualization Engine| Live Demo *Jan' 26*

- Built an interactive 3D graph traversal visualizer supporting BFS, DFS, Dijkstra, and A* pathfinding algorithms.
- Users can construct custom graphs in 3D space and watch each algorithm traverse nodes step-by-step with visual feedback.

Tech: *React, Three.js, WebGL*

EDUCATION

Lovely Professional University — B.Tech, Computer Science & Engineering *Aug '23 – Present*
Punjab, India • CGPA: 7.57

Kendriya Vidhyalaya Lansdowne — Intermediate (PCM) *2021 – 2022*
Uttarakhand • 76%

TRAINING

Flames Batch — Full Stack & Generative AI (W3 Grads) *July 2025*

- Completed intensive MERN stack training with production-level React, Node.js, Express, MongoDB and AI integration workflows.

CERTIFICATIONS

- IoT Hackathon — School of ECE, LPU | Link (Feb 2024)
- Cloud Computing — NEPTL | *LInk* (Apr 2025)
- Bits and Bites — Google | LInk (Sep 2024)
